

Alternate Air Door Kit

Thank you for purchasing the Alternate Air Door kit from www.rvbits.com
It is made up out of three simple pieces. The cover frame, spacer and slider door.
The diagram below shows the typical rivet positions for the AN470 –4 rivets used.

Below is a picture of a typical installation. Obviously the assembly can be rotated to optimize operating cable routing. Note that it is also advisable to drill a small vent hole in the slider door in order to drain fuel in case of engine flooding.
